Algorithms

- Linear regression
  - $y = mx + b$ for simple linear regression
  - $y = m_1x_1 + m_2x_2 + \ldots + b$ for multiple linear regression
  - x is projected onto a new space in partial least squares regression

- Neural networks
  - sets of nodes that transform inputs into an output
  - allows for nonlinear relationships.

- Deep learning
  - neural networks with multiple layers
  - increasingly popular and powerful with faster computers and larger datasets

- Not an exhaustive list!

4
