

**What is VVA?**

- $\Delta A$  is the Helmholtz free energy
  - at constant volume and temperature, dictates
    - spontaneity and
    - equilibrium constant of process
- in biomolecular simulation,  $\Delta A$  and  $\Delta G$  are usually assumed to be equal

# What is $\Delta A$ ?

- $\Delta A$  is the Helmholtz free energy
  - at constant volume and temperature, dictates
    - spontaneity and
    - equilibrium constant of process
- in biomolecular simulation,  $\Delta A$  and  $\Delta G$  are usually assumed to be equal

# How are free energy calculations useful?
