

- SLURM has its own commands (<https://slurm.schedmd.com/quickstart.html>)
- Let's try two simple ones
  - sinfo - information about the Bridges partitions. We want “RM-small” for our first job. Shorter jobs can be squeezed in between longer jobs.
  - squeue - lists jobs currently on the queue

```
daveminh@ssohub:~

br005: [~/ubq-md]:
```

- Let's write a batch script called MD\_ubq.job and put it in the ~/ubq-md/ directory. You can
  - use a terminal text editor like 'vi'
  - create it on your local computer and transfer it to bridges

```
MD_ubq.job
