

In the pharmaceutical industry, target selection is not only based on science, but also business

- How do pharmaceutical companies make money?
 - Costs
 - research and development is very expensive
 - manufacturing is relatively cheap
 - Income from drug sales

- provide monopoly on legal sales for a temporary period (in the U.S., 20 years from earliest filing)
 - need to be filed country-by-country
-
- In the current system, research and development (opposed to making old drugs) is incentivized by patents
 - must be novel, non-obvious, and useful. usually true for drugs.

- In general, this system means that for a drug development campaign, the market must be
 - large enough
 - rich enough
 - not too competitive
