## Preparing a script to run MD

## Why write a script?

- Molecular dynamics simulations require a lot of information about
  - Input data
    - coordinates
    - topology
      - which atoms are included in energy terms
      - parameters for functions in energy terms
  - System description
    - periodicity
    - constraints
  - Integrators

- algorithms to propagate forward in time
- adjust box size
- adjust kinetic energy (temperature)
- Simulation
  - how long to run
  - how much output data to store
- OpenMM can be run from widelyused computer programming languages, python and C++, facilitating extension and combination with other code
